About Muhasib ERP Releases

Overview

Muhasib ERP is continuously improved through planned software releases, feature updates, maintenance updates, performance enhancements, security fixes, and statutory changes.

Release documentation explains what has changed in each version, whether any action is required, and how the update may affect existing Muhasib ERP features, modules, integrations, and business processes.

Users and system administrators should review the relevant release notes before installing or using a new version of Muhasib ERP.

Purpose of Release Documentation

Muhasib ERP release documentation helps users and administrators to:

- Identify the latest available Muhasib ERP version.
- Understand new features and functionality.
- Review improvements made to existing modules and workflows.
- Identify resolved issues and known limitations.
- Review security, statutory, tax, and compliance-related updates.
- Confirm whether an update requires configuration or administrative action.
- Check compatibility with operating systems, databases, services, and integrations.
- Prepare users for changes in screens, reports, processes, or system behavior.

Types of Muhasib ERP Releases

Muhasib ERP releases may be classified according to the nature and scope of the changes included.

Release Type	Purpose	Typical Changes

Major Release	Introduces a significant product generation or platform-level change.	Major modules, redesigned workflows, architectural changes, platform upgrades, or important compatibility changes.
Feature Release	Adds new capabilities while maintaining the current major product generation.	New features, reports, dashboards, integrations, configuration options, and workflow improvements.
Maintenance Release	Improves the stability, reliability, performance, and usability of an existing release.	Bug fixes, performance improvements, minor corrections, and usability refinements.
Hotfix	Addresses a specific urgent or high-impact issue.	Critical operational fixes, security updates, integration corrections, or urgent statutory changes.
Preview Release	Allows selected users to evaluate upcoming functionality before general availability.	Alpha, beta, release candidate, pilot, or controlled early-access features.

Release Statuses

Each Muhasib ERP release may be assigned a status that indicates its availability and recommended use.

Status	Description
Preview	The release is being evaluated and is not intended for general production use.
Release Candidate	The release is undergoing final validation before general availability.
Current	The latest generally available release recommended for production use.
Supported	The release remains eligible for applicable maintenance, compatibility, and technical support.
Superseded	A newer recommended release is available.
End of Support	Regular maintenance or technical support is no longer provided for the release.

What Release Notes Include

The information published for a release depends on the nature and scope of the update.

Section	Description
Release Summary	Provides a brief explanation of the release and its main objectives.
New Features	Lists new modules, screens, reports, integrations, and business capabilities.
Enhancements	Describes improvements made to existing features, workflows, and user experience.
Resolved Issues	Identifies defects and operational issues corrected in the release.
Security Updates	Describes applicable security improvements and vulnerability corrections.
Compliance Updates	Explains changes related to tax authorities, regulations, statutory requirements, or fiscal integrations.
Compatibility Information	Identifies supported operating systems, databases, services, components, and integrations.
Known Issues	Lists confirmed limitations that remain under review and any available workarounds.
Required Actions	Explains any required backup, configuration, migration, deployment, or user-training steps.

Release Availability

The availability of a Muhasib ERP release may depend on:

- The Muhasib ERP edition or subscription plan.
- The modules and features enabled for the organization.
- The deployment model being used.
- The licensing and subscription status.
- The operating system and database environment.
- Enabled third-party, tax, fiscal, payment, or e-commerce integrations.
- Customer-specific configurations or customizations.
- The planned release and deployment schedule.

A release may be provided through one or more of the following methods:

- Automatic or assisted application update.

- Authorized installation or deployment package.
- Cloud or hosted environment deployment.
- Controlled rollout to selected users or environments.
- Technical support-assisted update.

Before Installing a Release

Before updating a production environment, the system administrator should complete the following checks.

Check	Description
Release Notes	Review the complete release notes, known issues, compatibility requirements, and required actions.
Database Backup	Create and verify a recent restorable backup of the Muhasib ERP database.
Active Users	Ensure users have completed or saved active transactions before the update begins.
Compatibility	Confirm compatibility with the operating system, database, connected services, and integrations.
Maintenance Window	Schedule an appropriate maintenance window where the update may interrupt normal operations.
Post-Update Validation	Verify login, transactions, reports, printing, integrations, and other critical functions after updating.

Do not interrupt the system while an application update or database migration is in progress. An interrupted update may leave the application or database in an incomplete state.

Editions and Subscription Plans

Muhasib Free and paid Muhasib ERP plans may use the same underlying product release. Access to modules, premium features, usage limits, and additional capabilities is determined by the applicable edition, plan, subscription, license, and entitlements.

Installing a new version does not automatically provide access to modules or premium features that are not included in the organization’s current plan.

Best Practices

- Review the release notes before installing every Muhasib ERP update.
- Keep production environments on a current or supported version.
- Create and verify a database backup before major updates and migrations.
- Install updates during a planned maintenance window where required.
- Confirm the compatibility of connected systems and integrations.
- Test critical business processes after completing an update.
- Record the installed version and build number for technical support purposes.
- Do not install preview releases in production unless explicitly authorized.

Frequently Asked Questions

Are all Muhasib ERP updates mandatory?

Not every update is immediately mandatory. However, security, statutory, tax, compliance, compatibility, and critical operational updates may require timely installation.

Will an update delete existing business data?

An update may modify the database structure or system configuration, but it should not intentionally remove valid business data. A verified backup should always be created before installing major updates.

Can different customers use different Muhasib ERP versions?

Yes. Release availability may differ because of deployment schedules, customer-specific configurations, integrations, infrastructure requirements, or technical readiness.

Can a release be available to some users before others?

Yes. Muhasib ERP releases may be deployed in phases to support validation, infrastructure capacity, customer requirements, or controlled rollout procedures.

Should I install a preview release in a production environment?

No. Preview releases should only be used for authorized testing, evaluation, or controlled pilot deployments.

Where can I check the latest Muhasib ERP version?

Refer to the **Current Version** page in the Muhasib ERP Release Notes & Updates documentation.

How do I know what changed in a release?

Open the release notes for the relevant version. The release notes provide details of new features, enhancements, resolved issues, compatibility changes, known issues, and required actions.
