Current Version

Current Muhasib ERP Version

The latest version confirmed in the supplied Muhasib ERP source is **version 1.3.7, build 709**, with database revision **WS_MUHA_q_354**.

Before asking for support or installing an update, check these numbers in your own Muhasib installation. Your edition, enabled features and rollout schedule may be different.

How to check your version

Step 1: Open Muhasib ERP

Sign in to the company you normally use.

Step 2: Open the About window

Open **Help → About** or the available **Software Information** option.

Step 3: Note the three numbers

- Application version: **1.3.7**
- Build number: **709**
- Database revision: **WS_MUHA_q_354**

Before installing an update

- Make a complete database backup and confirm that it can be restored.
- Ask all users to save their work and close Muhasib ERP.
- Update the main computer or server first, followed by the other terminals.
- Do not switch off the computer while the application or database is being updated.

> **Need help?** If your version is older, your database revision is different, or your business uses a custom integration, contact Muhasib Support before updating. It is safer to ask first than to risk your business data.

After the update

Open Muhasib ERP and check the version again. Then test the work your business depends on most, such as sales, purchases, stock, payments, reports, printing and tax integrations.
