Product	Muhasib ERP
Version	**v1.3.7**
Build Number	**701**
Complete Build Number	**v1.3.7.701**
Release Date	December 2026
Release Type	Major Update
Status	Published
Audience	All Users

Summary

Muhasib ERP v1.3.7 introduces significant enhancements across the reporting and sales modules. This release adds the new **Supplier Wise Sales Report**, introduces **Delivery Challan** functionality, and resolves important commission calculation issues affecting sale return transactions.

The release also improves usability and data visibility through interface refinements, highlighted inventory audit differences, payment method reporting, additional filters, and automatic grand total calculations.

New Features

Supplier Wise Sales Report

A new **Supplier Wise Sales Report** has been added to the Sales Management module.

The report provides functionality similar to the Item Wise Sales Report, with an additional supplier filter that allows users to analyze item sales according to the associated supplier.

Delivery Challan Functionality

Delivery Challan support has been added to the Sales module.

The feature can be enabled or disabled through the applicable checkbox in **Global Settings**.

Payment Method Wise Amount Received

The **Detailed Sales Summary Report** now displays received amounts according to the payment method used.

This allows users to review amounts received through cash, bank, card, and other configured payment methods.

Customer Group Filter

A Customer Group filter has been added to the following reports:

- Sales Report
- Customer Due Report

The filter allows users to segment and analyze report data according to configured customer groups.

Improvements

Top/Least Sold Items Report

A **GRAND TOTAL** row has been added at the bottom of the Top/Least Sold Items Report.

Muhasib ERP automatically calculates totals for all applicable numeric columns.

Item Inventory Audit

Items with an inventory difference greater than zero are now displayed using **red bold formatting** in the data grid.

The formatting is applied to the following columns:

- Item Barcode
- Item Name
- Cost Price
- Sale Price
- Location
- Quantity values

The HTML report output also applies the same red bold formatting, making inventory differences easier to identify in exported or printed reports.

Sales Management UI

A new icon for the **Supplier Wise Sales Report** has been added to the Reports section of the Sales Management module.

Delivery Challan Improvements

The Delivery Challan output now includes the following information:

- Company address
- Company phone number
- Service staff details

The automatic selection of the Delivery Challan option has been removed from Global Settings. Users can now manually control whether the feature is enabled.

Sales Management Default Tab

The default focus in the Sales Management module has been changed from **Reports** to **Transactions**.

This change provides faster access to commonly used sales transaction functions.

Fixes

Commission Calculation Issue

Commission calculation errors occurring during sale return transactions have been resolved in the following reports:

- Invoice Wise Service Staff Report
- Item Wise Service Staff Report
- Service Staff Wise Sales Report

Commission values are now calculated correctly when sale return transactions are included in report results.

Minor UI Adjustments

Minor alignment, spacing, and display issues reported in previous versions have been corrected.

Security Updates

- Improved user permission checks in reporting modules.
- Enhanced session validation for restricted features.

Database Changes

This release may include changes to the Muhasib ERP database structure or related database objects.

Create and verify a complete database backup before applying the update.

Important Notes

- Take a complete and restorable database backup before starting the update.
- Ensure all users have saved their work and logged out of Muhasib ERP.
- For multi-terminal environments, update the server or main system before updating client terminals.
- Contact support before updating if the installation includes custom reports, custom integrations, or modified workflows.
- The Delivery Challan feature is now controlled manually through **Global Settings**.
- Do not interrupt Muhasib ERP while the application update or database migration is in progress.

Update Instructions

Step 1: Back Up the Database

Create a complete backup of the Muhasib ERP database and confirm that the backup can be restored if required.

Step 2: Close Active Sessions

Ensure all users have completed their work, saved active transactions, and logged out of Muhasib ERP.

Step 3: Update the Main System

Run the update installer on the server or main Muhasib ERP system.

Allow the application and database update processes to complete without interruption.

Step 4: Verify the Build Number

Open the **About** section in Muhasib ERP and confirm that the installed build number is:

```
701
```

Step 5: Update Client Terminals

Update all client and terminal systems connected to the main Muhasib ERP database.

Step 6: Test Key Features

Test the following features after completing the update:

- Supplier Wise Sales Report
- Delivery Challan creation and printing
- Detailed Sales Summary Report
- Customer Group filters
- Top/Least Sold Items Report totals
- Item Inventory Audit highlighting
- Service staff commission reports
- Sale and sale return transactions

Post-Update Verification

After installing Muhasib ERP v1.3.7, verify the following:

Verification Check	Expected Result
Build Number	The About section displays build number **701**.
User Login	Authorized users can sign in successfully.
Sales Management	The Transactions tab opens by default.
Supplier Wise Sales Report	The report is available and correctly filters sales by supplier.
Delivery Challan	The feature can be manually enabled or disabled through Global Settings.
Inventory Audit	Items with differences greater than zero are displayed in red bold formatting.
Commission Reports	Commission values remain accurate when sale returns are included.

Known Issues

No critical known issues have been reported for this release at the time of publishing.

Any newly confirmed issues or workarounds will be published in the Muhasib ERP documentation.

Frequently Asked Questions

Is this update recommended for all users?

Yes. Muhasib ERP v2026.12 is a published major update intended for all users, subject to deployment compatibility and any customer-specific modifications.

Do I need to back up the database before updating?

Yes. Create and verify a complete database backup before applying the update.

Which system should be updated first in a multi-terminal environment?

Update the server or main Muhasib ERP system first. Update the connected client terminals after the main system update has been completed successfully.

How do I enable Delivery Challan functionality?

Open **Global Settings** and manually enable the applicable Delivery Challan option.

How can I confirm that the update was installed successfully?

Open the Muhasib ERP About section and verify that build number **701** is displayed.

Do custom reports or integrations require additional review?

Yes. Contact your official support channel before applying the update if the installation contains custom reports, integrations, or modified workflows.
